

FAQ# 10-03040301
Modified 03/04/03

What Tags and Properties does the Saffron XSL-FO input module support?

DynaLivery's Saffron input module for XSL-FO supports the same set of tags and properties as Apache FOP plus:

word spacing
keep-together.within-page (at the block level)

In addition, Saffron's XSL-FO input module will support two tags for internal-graphics and charts that we found it necessary to add to approach the functionality of market leading report writers such as Crystal Reports from Crystal Decisions.
